Table of Contents

1. Executive Summary	4
2. Attack Surface Overview	5
3. Methodology & Scope	6
4. Reconnaissance Results	7
5. Asset Discovery - Subdomains	8
6. Subdomain Takeover Risk Assessment	9
7. Port & Service Analysis	10
8. Web Asset Analysis	11
9. SSL/TLS Analysis	12
10. Technology Fingerprinting	13
11. Vulnerability Findings	14

12. Threat Intelligence Context	CONFIDENTIAL - FOR AUTHORIZED RECIPIENTS ONLY	16
13. Email & People Intelligence		17
14. Risk Score - Transparent Breakdown		18
15. Remediation Roadmap		19
16. Change Analysis (Delta)		20
17. Appendix		21

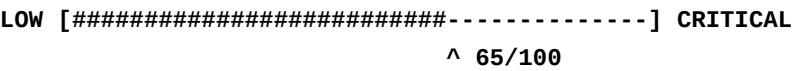

1. Executive Summary

The assessment of test.com identified 5 vulnerabilities across 8 live hosts, including 1 critical and 2 high-severity issues. 1 of these are listed in CISA's Known Exploited Vulnerabilities catalog and require immediate attention. 1 out of 3 employee emails (33.3%) were found in known data breaches. The overall risk score is 65/100 (HIGH).

Key Metrics

Metric	Value
Subdomains Discovered	12
Live HTTP Assets	8
Open Ports	45
Unique Services	3
Total Vulnerabilities	5
Critical / High	1 / 2
CISA KEV Matches	1
Avg EPSS Score	0.97
Emails Discovered	3
Breached Emails	1 (33.3%)
Risk Score	65/100 [HIGH]

Risk Gauge

Business Impact

1 critical vulnerabilities pose an immediate risk of unauthorized access, data exfiltration, or full system compromise. 1 vulnerabilities are confirmed actively exploited in the wild, increasing the probability of a targeted attack.

2. Attack Surface Overview

Discovery

Total Subdomains Found	12
Live / Resolving Hosts	2
Dead / Unresolved	0

Network Exposure

Total Open Ports	3
Unique Services Running	3
Dangerous Ports Exposed	1 (!)

Web Presence

HTTP Assets Discovered	8
HTTPS Assets	1
HTTP Only (No Encryption)	1 (!)

Vulnerabilities

Total CVEs Found	5
Critical	1 (!)
High	2 (!)
Medium	1
Low	1
CISA KEV Matches	1 (!)
Avg EPSS Score	0.97

Intelligence

Emails Discovered	3
Emails in Breaches	1 (33.3%) (!)
Shodan Exposed Services	1

OVERALL RISK SCORE: 65/100 [HIGH]

3. Methodology & Scope

3.1 Assessment Approach

This assessment combines Passive Reconnaissance (Shodan, Censys, WHOIS, cert.sh, theHarvester - no direct target contact) with Active Scanning (Naabu port scanning, HTTPX probing, Nuclei vulnerability detection). Active scanning was performed against authorized targets only.

3.2 Tools Used

Tool	Type	Purpose
Subfinder	Passive	Subdomain enumeration from 40+ sources
Amass	Passive	DNS enumeration and OSINT
Shodan API	Passive	Internet-wide service and banner data
Censys API	Passive	Certificate transparency and TLS analysis
WHOIS	Passive	Domain registration and ownership data
theHarvester	Passive	Email and people intelligence
Hunter.io API	Passive	Email discovery and verification
LeakCheck API	Passive	Breach database correlation
Naabu	Active	TCP port discovery and scanning
HTTPX	Active	HTTP probing and tech fingerprinting
Nuclei	Active	Template-based vulnerability detection
NVD / NIST	Enrichment	CVE details and CVSS scoring
FIRST EPSS	Enrichment	Exploitation probability scoring
CISA KEV	Enrichment	Known exploited vulnerabilities list

3.3 Compliance Framework Alignment

Framework	Controls	Scope
SOC 2 Type II	CC6.1, CC6.6, CC6.7, CC7.1	Access Controls & Security Events
ISO 27001:2022	A.8.8, A.8.9, A.12.6, A.14.2	Technical Vulnerability Mgmt
PCI-DSS v4.0	Req 6.2, 6.3, 11.3	Vuln Scanning & Secure Development
OWASP Top 10	A01-A10:2021	Web Application Risk Categories

3.4 Scope

In-Scope: test.com and all discovered subdomains
Out-of-Scope: Third-party CDN, WAF-protected endpoints
Scan Start: 2026-04-12T18:00:00
Scan End: 2026-04-12T18:30:00

4. Reconnaissance Results

4.1 WHOIS & Domain Intelligence

Registrar: GoDaddy
Creation Date: 2015-03-12
Expiry Date: 2026-05-12
Name Servers: ns1.test.com, ns2.test.com
DNSSEC: Not configured (!)
Privacy: Exposed (!)

WARNING: DOMAIN EXPIRING SOON

Domain expires in 30 days. Risk of expiry hijacking.

WHOIS Risk Flags

- Domain expiring within 60 days
- DNSSEC not configured

4.2 Shodan Intelligence

Shodan identified 1 hosts and 1 services.

IP / Host	Port	Product	Version
1.2.3.4	443	nginx 1.18	

4.3 Censys Intelligence

Censys identified 1 hosts and 0 services.

5. Asset Discovery - Subdomains

2 subdomains were discovered for test.com.

Source	Subdomains Found
subfinder	1
crtsh	1

Subdomain Inventory

Subdomain	IP	Status	Sources
api.test.com	1.2.3.4	Live	subfinder
old.test.com	-	Live	crtsh

6. Subdomain Takeover Risk Assessment

Subdomain takeover occurs when a subdomain's DNS record points to a third-party service that has been deleted or unclaimed. An attacker can claim the service and serve malicious content under your domain.

All discovered subdomains are currently resolving and responsive. No dangling DNS indicators detected.

7. Port & Service Analysis

3 open ports were discovered across all hosts.

Dangerous Ports (1)

DANGEROUS PORT - 3389 (RDP)			
Host:	srv.test.com		
Service:	rdp		
Remediation:	Close or restrict access to trusted IPs only.		

Port Inventory

Host	Port	Service	Risk
api.test.com	443	https	Standard
api.test.com	22	ssh	Standard
srv.test.com	3389	rdp	Dangerous

8. Web Asset Analysis

2 HTTP assets were discovered and probed.

8.1 Response Code Distribution

Status Code	Meaning	Count
200	OK	1
403	Forbidden	1

8.2 HTTP Assets

URL	Status	Title
https://api.test.com	200	API
http://old.test.com	403	Forbidden

9. SSL/TLS Analysis

TLS configuration is a direct compliance requirement for PCI-DSS, SOC2, and ISO 27001.

HTTPS Coverage

HTTPS Assets	1
HTTP-Only Assets	1 (!)
HTTPS Coverage	50.0%

Detailed TLS version and cipher analysis requires Censys API integration. HTTPS coverage statistics are shown above based on HTTPX probing results.

10. Technology Fingerprinting

3 unique technologies were detected across web assets.

Technology	Occurrences
nginx	5
jQuery	3
PHP	2

11. Vulnerability Findings

11.1 Vulnerability Statistics

Severity	Count	SLA	Action Required
CRITICAL	1	24-48 hrs	Immediate executive attention
HIGH	2	7 days	Urgent patch/remediation
MEDIUM	1	30 days	Planned remediation
LOW	1	90 days	Scheduled maintenance
INFO	0	-	Informational only

CISA KEV ALERT: 1 known exploited vulnerabilities

These vulnerabilities are confirmed actively exploited by real attackers.
Immediate patching is required per CISA BOD 22-01.

11.2 Critical & High Findings

FINDING #1 | CRITICAL | CVE-2021-41773

Name: Apache RCE
Host: srv.test.com
EPSS: 0.97 (top 97%)
KEV Status: IN CISA KNOWN EXPLOITED LIST
Controls: PCI-DSS Req 6.3

Impact: Path traversal

Remediation: Upgrade

FINDING #2 | HIGH | CVE-2023-1234

Name: Open Redirect
Host: api.test.com

Remediation: Validate URLs

FINDING #3 | HIGH | No CVE

Name: Info Disclosure

Host: api.test.com

Remediation: Hide version

11.3 MEDIUM Findings (1)

Finding	Host	CVE
Missing HSTS	old.test.com	-

11.3 LOW Findings (1)

Finding	Host	CVE
Cookie flag	api.test.com	-

12. Threat Intelligence Context

12.1 CVE Threat Context

1 CVEs are in CISA's Known Exploited Vulnerabilities catalog. These are actively used by real threat actors and ransomware groups. The average EPSS score of 0.97 indicates HIGH probability of exploitation within 30 days.

12.2 Breach Intelligence Correlation

1 employee emails were found in known data breaches (33.3% breach rate). If password reuse exists, attackers may use these credentials for VPN, admin panels, or cloud services.

13. Email & People Intelligence

13.1 Email Exposure Summary

Metric	Count
Total Emails Discovered	3
Breached	1
Clean	1
Unchecked	1
Password Leaks	1
Breach Rate	33.3%

13.2 Discovered Emails

Email	Source	Breached	Pwd Leaked
admin@test.com	hunter	Yes	Yes
user@test.com	theharvester	No	No
info@test.com	whois	No	No

13.3 Breach Details (1 emails)

BREACH - admin@test.com	
Found In:	RockYou2024
Pwd Leaked:	Yes
Remediation:	Force password reset. Enable MFA immediately.

14. Risk Score - Transparent Breakdown

The risk score is a weighted composite. This section shows exactly how it was calculated for full audit transparency.

14.1 Scoring Components

Factor	Value	Contribution
Critical CVEs	1	40 pts (x40 each)
High CVEs	2	50 pts (x25 each)
Medium CVEs	1	10 pts (x10 each)
Low CVEs	1	3 pts (x3 each)
Info findings	0	0 pts (x1 each)
Subdomains > 50	12	0
Ports > 100	3	0
HTTP Assets > 20	8	0
Breached Emails	1	+5

Total (capped at 100): 65/100 - HIGH

14.2 Key Risk Drivers

- 1 Critical CVEs contributing 40 points
- 2 High CVEs contributing 50 points
- 1 actively exploited vulnerabilities (CISA KEV)
- 1 dangerous ports exposed (FTP/RDP/Telnet/etc)

15. Remediation Roadmap

Immediate - 0 to 48 Hours

#	Action	Compliance Controls
1	Patch CVE-2021-41773 Apache RCE	PCI-DSS Req 6.3, SOC2 CC6.1
2	Force password reset for admin@test.com	SOC2 CC6.1

Short Term - 1 to 7 Days

#	Action	Compliance Controls
1	Close RDP port 3389 on srv.test.com	PCI-DSS Req 1.1.6

Medium Term - 8 to 30 Days

#	Action	Compliance Controls
1	Enable HSTS on all web assets	SOC2 CC6.7

16. Change Analysis (Delta)

2 changes were detected since the last scan.

Change Type Summary

Change Type	Count
new_subdomain	1
port_closed	1

Recent Changes

Type	Details	Detected At
new_subdomain	new.test.com appeared	2026-04-10
port_closed	FTP port 21 closed	2026-04-09

17. Appendix

Appendix A - Scan Execution Log

Scan ID: N/A
Status: completed
Started: 2026-04-12T18:00:00
Completed: 2026-04-12T18:30:00

Phase Execution:

recon: done
scan: done

Appendix B - Data Sources Status

Source	Status
Shodan API	Available
Censys API	Available
WHOIS	Available
LeakCheck	Available

Appendix C - Glossary

Term	Definition
EPSS	Exploit Prediction Scoring - exploitation probability in 30 days
KEV	Known Exploited Vulnerabilities - CISA catalog of confirmed exploits
CVSS	Common Vulnerability Scoring System - severity rating 0.0-10.0
CNAME	Canonical Name DNS record - alias pointing to another domain
TLS	Transport Layer Security - encryption protocol for web traffic
OSINT	Open Source Intelligence - publicly available information
SOC 2	Service Organization Control 2 - trust service audit framework
PCI-DSS	Payment Card Industry Data Security Standard
EPSS	Exploit Prediction Scoring - probability of exploitation (0-1)
